PROFESSIONAL SUMMARY

Computer Science Master's student specializing in the Internet of Things (IoT) at Malmö University, actively seeking a Master's thesis project for Spring 2027. Proven ability to bridge the gap between physical hardware and digital interfaces through hands-on prototyping with Raspberry Pi, Arduino, and full-stack web integration. Equipped with a strong foundation in system architecture, embedded systems, and applied machine learning, with a passion for designing intelligent, connected, and scalable distributed systems.

TECHNICAL SKILLS

- **Hardware & IoT:** Raspberry Pi, Arduino, RFID/NFC Sensors, Edge AI, TinyML, IoT Connectivity, System Architecture
- **Languages & Frameworks:** Python, JavaScript (ES6+), React, HTML5, CSS3, RESTful APIs, MUI, Styled Components
- **Core CS & Engineering:** Machine Learning, Distributed Systems, Cloud Computing, Database Management, Git

ACCOMPLISHMENTS

- Designed and fully integrated a working prototype of an NFC-triggered music system, successfully merging hardware, local processing, and web-based controls into a single seamless user experience.
- Successfully deployed a TinyML model on an edge device, achieving high accuracy under strict memory and power constraints.

EDUCATION

Malmö University, Malmö **Aug 2025 to Present**

Master's Degree in Internet of Things (IoT)

Bridging the gap between physical hardware and digital networks through embedded systems, distributed system architecture, and artificial intelligence.

- AI & Data Management for IoT, Software Architecture & Security, IoT Prototyping, Innovation & Business Models.

Completing final semester coursework, actively seeking a Master's thesis project for Spring 2027

Aditya University, India **Jun 2018 to Jun 2022**

Bachelors Degree in Computer Science

HTML, CSS, Python, Data Structures, OOPS, Java, Database Management, Compiler Design, Datawarehouse and Mining, Cyber Security, Distributed Systems, Cloud Computing, Operating Systems

PROFESSIONAL EXPERIENCE

Web Developer, Enweave **Sept 2024 to Jan 2025**

Malmö

- Developed front-end components for an AI-driven application aimed at assisting companies in establishing sustainability goals.
- Designed and implemented reusable React components, ensuring code modularity and maintainability.
- Translated Figma design mock-ups into fully responsive user interfaces, enhancing user experience across devices.
- Conducted rigorous testing of UI components to guarantee robustness and optimal performance.
- Worked in close collaboration with backend counterparts to align front-end design with functional requirements and system logic.

PROJECTS

TAPTONE - NFC Music Player - [2026]
Developed an interactive IoT music player using Raspberry-Pi and RFID sensors, resulting in a fully integrated hardware-to-web system with zero-latency audio playback.

TIC-TAC-TOE - [2025] HTML, CSS, JavaScript, React
